

## Services Provided by the ISE

Although end-to-end mission processes form the heart of the ISE, they depend on the availability of core ISE capabilities that cut across multiple missions. ISE Core capabilities are common (shared across mission processes) and recurring in nature. Some examples include access and collaboration tools, achieving interoperability across multiple SBU-CUI networks and state and major urban area fusion centers. ISE Core Capabilities significantly contribute to improving mission processes such as suspicious activity reporting and alerts, warnings, and notifications.

The ISE supports several services vital to the protection of our country:

- [Assured Sensitive by Unclassified \(SBU\) Interoperability](#) <sup>[1]</sup>
- [Interagency Threat Assessment and Coordination Group \(ITACG\)](#) <sup>[2]</sup>
- [State and Major Urban Area Fusion Centers](#) <sup>[3]</sup>
- [Controlled Unclassified Information \(CUI\)](#) <sup>[4]</sup>
